PRODUCT INFORMATION

- **Standard / basic rectangular shape**
- Barrier Fenders are the premium PVC marina fender on the market.
- Made in New Zealand using the best products available.
- Meets the specifications and requirements for New Zealand marinas.
- The non-marking white PVC cover material is tough and durable with a 5 year UV warranty. It is designed to withstand New Zealand's harsh sun and environment.
- Fitted with an 'anti-flip' tab to stop the fender from being blown up onto the dock in strong winds.
- The internal foam is a high quality closed cell Polyethylene foam (PE) that will not absorb water, rather than the lower grade Cross-linked Polyethylene (XPE) used in other marina fenders.
- Stainless steel fasteners supplied
- Can be installed on all marinas, docks and wharfs regardless of whether they have a fixed rub strip on them or not.
- The Custom Barrier option allows a fender to be made that perfectly fits the angled corner in any marina berth, or whatever length you require.
- PVC covered fenders are not recommended for boats with vinyl wraps. Please talk to us about other more suitable options.
- Installation instructions provided.
